

How is it different from a common granite?

Granite is a natural stone that is present in various shades of colour in many quarries. However, although it is a strong, resilient material, it is a natural stone that is porous and therefore it is vulnerable to staining.

Sensa by Cosentino® is a protective treatment which reduces the granite's absorbing capabilities and hence the material's stainability. Sensa by Cosentino® is not a sealant and bonds to the surface of the granite in a different way from conventional sealants.

Why buy SENSEA by Cosentino® granites?

- Highly resistant to stains as a result of the treatment.
- Does not require special maintenance.
- Does not need special cleaning products.
- Cosentino® brand. Market leader in worktops.
- 10-year warranty.
- Not a conventional sealant. It is attached to the granite.
- Resists the use of harsh cleaning products.
- High level of performance, and after-sales service.

What are the advantages of treatment with SENSEA by Cosentino®?

- It can be used with any chemical cleaning product, such as ammonia or harsh (alkaline or acidic) cleaning products.
- Tolerates temperatures above 300°C (572°F).
- It is suitable for applications in and outdoors.
- Strong bond that does not weaken over time.
- The treatment penetrates and fuses with the material.
- The treatment is not visible.
- There is no change in its colour or the beauty of the stone.

How do we prepare for the launching of new granites?

- The current range of granites is completed, with 5 new granites, with STAR GALAXY having a mirage, leather finish, COSMIC GREY and THAILAND having a leather look and GABON and AUSTRALIA being finished in mirage.
- 100% payment at exhibition. Numerus clausus.
- New Sensa books, with samples. New brochure with photograph of slab and enlarged detail.

Differences between SENSEA by Cosentino® and other sealants

SENSEA by COSENTINO®	Other sealants
Does not require re-sealing after initial application	Require further applications every 12-16 months
Forms a chemical bond with the stone, which enables it to breathe	Cover the surface, penetrating the pores and blocking the granite's porosity
Remains attached to the structure and is long-lasting	Their protective properties wear out over time
It is not affected by normal cleaning products	Common domestic cleaning products damage their protective properties

The range of granites is increased in 2010

The Sensa treatment repels liquids and guards against stains. Treated granite repels liquids and stains.

The Sensa treatment is so effective that even sands treated with the liquid resist the penetration of liquids.
