

INTEGRITY by Cosentino® is the brand under which Cosentino® is launching its Silestone® sink, manufactured entirely from a single piece, with innovative moulding technology. ONE is the first model, measuring 41 x 51 x 15.5 cm.

Why buy INTEGRITY by Cosentino®?

- **MODERN DESIGN:** The only sink unit made from a single piece of quartz, without any joints, on the market. There is no better material that matches the lustre, the colour, or the texture of an integrity sink. There are other materials, acrylics, for instance, but they never reach full integration.
- **QUALITY:** CE marking. This is the same material used to make the Silestone slabs, and therefore it shares the same properties (hardness, low porosity, and maximum hygiene).
- **EASY CLEANING AND MAINTENANCE:** Due to the manufacturing process and the raw material, it has low porosity, and is therefore easy to clean, not requiring any special care for everyday use. Only a few tips for use and cleaning need to be followed.

What competitive advantages are there in INTEGRITY by Cosentino®?

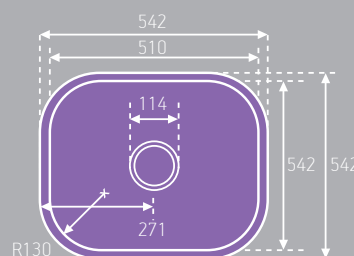

- **INDUSTRIAL PRODUCT:** The product is the result of an industrial moulding process, which guarantees consistency with respect to size and characteristics. Absence of problems typical of products made by joining parts together.
- **INTEGRATION:** Worktop and sink made from the same material. Unity in your kitchen, thanks to the "SINGLE PIECE" effect. Same colour and lustre.
- **POSITION ON THE MARKET:** Competitive price.
- **EASY TO INSTALL:** It is simple to install underneath the worktop, without the need for any special tools. Seamless integration is also possible if installed by a specialist stone mason. It is supplied with mounting accessories, drain valve and anchor rods.
- **WIDE RANGE OF COLOURS:** Combinations are possible depending on the style, your way of life or the design of your kitchen.

How to promote INTEGRITY by Cosentino®?

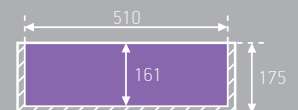

- Use of brochure.
- 100% payment at exhibition. Numerus clausus.
